DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed 7/8/03 fails to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because each item of information in the IDS is not identified properly, i.e., identification of inventor, issued date for each item is missing. It has been placed in the application file, but the information referred to therein has not been considered as to the merits. Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609 ¶ C(1).

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Application/Control Number: 10/616,326

Art Unit: 2816

The abstract of the disclosure is objected to because: (i) it uses words which can be implied, i.e., the first sentence should be deleted.

Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Transistors M2, M5, M7 and resistor R2 are critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). While the specification enables a differential structure shown in Fig. 6 for use as delay cells in a VCO circuit, the specification does not enable the use of a delay circuit without having a differential structure, therefore, the differential structure is seen as essential for the practice of the invention.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as failing to set forth the subject matter which applicant(s) regard as their invention. Evidence that claims 1-7 fail(s) to correspond in scope with that which applicant(s) regard as the invention can be found in the disclosure. In the disclosure, applicant has identified the invention is for improving the tuning

Application/Control Number: 10/616,326

Art Unit: 2816

range in a VCO circuit by using differential delay cells having the structure shown in Fig. 5 instead of using the differential delay cells having the structure known in the art (Figs. 2-5), and this identification indicates that the invention is different from what is defined in claims 1-7 because the differential feature of the delay cell is missing in these claims.

Allowable Subject Matter

Claims 8-12 would be allowable if rewritten to overcome the rejection(s) under 35
 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Claims 8-12 are allowable because the prior art of record fails to disclose or suggest the inclusion of first and second NMOSs, first resistor and first PMOS arranged as recited in claim 1. The inclusion of these specific arrangement defines patentability over the prior art of record because such an arrangement would provide greater tuning range when the delay cell is used in a VCO circuit.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh Nguyen whose telephone number is 571-272-1748. The examiner can normally be reached on Monday, Tuesday, Thursday, Friday 7:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Callahan can be reached on 571-272-1740. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
